

VERSATILE ALL-ROUNDER
Multifunctional

AVENTO DAY-FLEX

Ref. 22000

A revolutionary compact chair with great functionality thanks to an E-lift function, a horizontal examination position, and a Trendelenburg position. This makes the Avento Day-flex a versatile chair with a wide range of applications: it is ideal for day hospitals and examination rooms. Moreover, it enhances the patient's mobilization and assists patients needing more care.

(*): Option

Comfort, ergonomics and functionality

- + E-lift function
- + Increased self-reliance
- + Horizontal examination position and Trendelenburg
- + No power cable needed thanks to the Li-ion battery (*)

ADDITIONAL ASSETS OF THE AVENTO DAY-FLEX

The Avento Day-flex offers a versatile seating solution that combines the best features of a hospital bed and a relax chair.

FIVE PRE-PROGRAMMED FUNCTIONS AND ONE CUSTOMISABLE FUNCTION

In addition to the separate adjustment of height, inclination, backrest, seat, and legrest, the chair can be quickly and easily put into **several pre-programmed positions**, such as the seating position, 'zero gravity' relax position, horizontal examination position, E-lift position, and the Trendelenburg position.

Furthermore, a **personal preference position** can be saved for quick reactivation later.

Horizontal examination position

Put the chair without any effort into a horizontal position to perform patient examinations easily.

E-lift function

Makes it easier to sit down or get up and increases the patient's self-reliance.

Trendelenburg function

Use the Trendelenburg position for quick and crucial medical interventions that are essential for the patient's safety.

INTEGRATED SAFETY FUNCTIONS

The Avento Day-flex is standard equipped with a brake buzzer that emits a clear signal when the chair brakes are not activated and the power cable is still plugged in.

Moreover, the chair can only be operated when the central brake is activated. This prevents unsafe situations, especially during the E-lift movement. The central brake is activated effortlessly by means of side pedals that are equipped with a soft brake system.

Intuitive software prevents non-ergonomic positions during its use.
